Project Summary Rocky Mountains Cooperative Ecosystem Studies Unit

Project Title: How Selective are Biological Controls?: Testing non-target
herbivory by biological control agents for Yellow toadflax (Linaria vulgaris)
and Dalmatian toadflax (Linaria genistifolia spp. Dalmatica.)
Type of Project: Research/biological sciences
Funding Agency: National Park Service
Effective Dates: May 15, 2003 - May 31, 2005
Funding Amount: \$6,458.00
Investigators and Agency Representative:
Dr. Tim Seastedt, Professor, EPO Biology, INSTAAR, CB 450, University of
Colorado, Boulder, CO 80309-0450, phone: (303) 492-3302 fax: (303) 492-
6388, Timothy.Seastedt@Colorado.EDU
Terry Terrell, Research Administrator, Rocky Mountain National Park, 1000
U.S. Highway 36, Estes Park, CO 80517, Phone: (970) 586-1282,
Terry.Terrell@nps.gov
Project Abstract:
Research would be focused on testing possible herbivory by biological control
insects on native plants in the same family, Scrophulariaceae.
- Both a control group of native plants and a test group will be established
and comparisons made.
- The test group of RMNP native plants from the Scrophulariaceae family will
be relocated to established toadflax/biocontrol sites and monitored for
predation and other signs of poor growth and reproductive performance.
- Populations of biocontrols at sites will be confirmed.
- Monitoring of the effects of biocontrol herbivory on toadflaxes to answer
question of whether effective means of control.
Plants for use in this research will be salvaged from the Bear Lake Road
Reconstruction corridor in Rocky Mountain National Park. Testing of plants
will occur at University of Colorado - Boulder. Data will be statistically
analyzed for significance.
Outcomes with completion dates:
The Final Report will describe whether native Scrophulariaceae of Rocky
Mountain National Park are susceptible to negative impacts by biological
control agents and describing the insects' efficacy in controlling exotic
toadflaxes. Annual reports are due at the end of each calendar year.
Researchers will also make a presentation to ROMO staff on the results of the
project and recommendations for the advisability of using biological controls
for toadflax. If appropriate, a peer reviewed journal article would be
produced.
Keywords: Rocky Mountain National Park, Yellow toadflax (Linaria vulgaris),
Dalmatian toadflax (Linaria genistifolia spp. Dalmatica), biocontrols
