

## Acknowledgements

---

Writing a report of this nature requires the cooperation of numerous individuals and institutions for their support. Foremost I would like to express my deepest appreciation to the indigenous tribes and consultants. I am especially indebted to the various representatives and consultants who shared their knowledge about the cultural significance of plant resources and the cultural landscape at both project sites. Without their interest and cooperation the project could not have been brought to completion.

The visitations and research at the Sand Creek National Historic Site and Bent's Old Fort National Historic Site would not have been possible without the generous support and expertise of National Park Service officials. Superintendent Dr. Alexa Roberts and staff offered critical advice and assistance throughout the project.

I also have been fortunate to receive financial support for the data collection and research support for the project through the Rocky Mountains Cooperative Ecosystem Study Unit, National Park Service. Dr. Christine Whitacre, Cultural Resource Specialist and Kathy Tonnessen, Research Coordinator provided not only the necessary funding, but also advice at critical junctures. This work would have not been possible without generous financial support and cooperation.

Finally, I dedicate this work to the involved indigenous nations. Despite the many cultural changes experienced throughout their histories, they have actively maintained their traditions and cultural distinctiveness. Their cultural vitality continues to enrich and shape the region's history. I hope that the information contained within the following report will contribute positively toward managing cultural resources and the cultural landscapes.
