Sky Ranch Historic District, Moose, Teton County, WY

Sky Ranch Historic District – Narrative Description

Summary

The Sky Ranch Historic District is a 13.66-acre vacation property located within the boundaries of Grand Teton National Park, approximately 3 miles west of Moose, Wyoming, and 15 miles north of Jackson, Wyoming. The property lies in the Snake River valley, between the Teton and Gros Ventre ranges, at the base of Buck Mountain.

The property spans the forested slopes of the Teton Range and the sagebrush flats of the Snake River valley. The residential buildings on the property, which include a main cabin, guest cabin, servants' cabin, bathhouse and bunk house, are situated at the western edge of the forested area, and arranged in a somewhat linear fashion oriented to the east/southeast, affording spectacular views of the Gros Ventre Range, with the meadows and pastures of the historic White Grass Ranch in the foreground.

To the west of the buildings, the land rises toward the peaks of the Teton Range, with foothills/subalpine vegetation consisting primarily of Douglas fir, lodgepole pine and aspen. The western boundary of the property is defined by the Valley Trail, which runs along the base of the mountains from Teton Village to Taggart Lake.

The buildings on the property are confined to domestic and agricultural uses. Associated landscape features include access roads, gates, buck and pole fencing, a corral, a water catchment system, creeks, a bridge, a culvert, stands of fir and aspen, meadows, trails and walking paths, small areas of lawn and patio, a picnic/barbeque area, a concrete property marker, a salt lick and play structures such as a tree fort and a yard swing. Important natural features include the Teton and Gros Ventre ranges, the Snake River valley and two natural springs.

Methodology

In the course of a five-day historic preservation field class, University of Wyoming American Studies students under the direction of Research Scientist Mary Humstone surveyed and documented the landscape and buildings at Sky Ranch, and interviewed members of the Balderston family, original owners of the property. Additional research was conducted at the Jackson Hole Historical Society, the Teton County Courthouse and the University of Wyoming American Heritage Center.

Buildings and structures were evaluated as contributing or non-contributing based on age and significance, condition and integrity. Because of the overall integrity of the site, only one building was evaluated non-contributing due to age. Specific landscape features noted under "Cultural Landscape Characteristics" are not considered as individual contributing features for purposes of the National Register nomination; however, they are considered significant in understanding the district and its context, and appreciating Sky Ranch as a rural historic district.

Cultural Landscape Characteristics

National Register of Historic Places Continuation Sheet

Section No. 7 Page 2

Sky Ranch Historic District, Moose, Teton County, WY

The following landscape characteristics define the Sky Ranch Historic District.

Natural Systems and Features

Sky Ranch straddles the border between the forested slopes and ridges of the Teton Range, and the sagebrush flats of the Snake River valley. The Teton Range, and specifically Buck Mountain, rises up behind the western boundary of the property, while to the east the property flattens out into the valley of the Snake River. At the far side of the valley to the east, and in view of the property, rises the Gros Ventre Range. The property is fed by two natural springs and natural runoff.

Spatial Organization and Cluster Arrangement

The landscape is organized to take advantage of the natural view shed, while minimizing impact on the land. The property is organized into two clusters: 1) domestic buildings, and 2) the barn and associated corrals. The domestic cluster is located approximately in the center of the property. The three main residential structures are sited along the hillside in a roughly linear pattern from north to south, at the transition between the forest and the sagebrush. Cabins are oriented to face the Gros Ventre Range to the east/southeast, and are arranged in such a way that one cannot be seen from inside the other. The trees and mountains to the west of the cabins provide relief from the hot afternoon sun. Utility structures are located behind (west of) the residential buildings, and are not visible from the approach to the property. All buildings were sited so as to have minimum impact on the natural landscape and to allow retention of as much of the natural topography and related features as possible.

The barn and corrals constitute an agricultural cluster in the northeast corner of the property, downwind from and lower in elevation than the domestic cluster, and screened by a forest of Douglas fir. A buck and pole fence delineates the southern and eastern property boundaries. The following landscape features are important to the historic integrity of the property: 1) the siting of buildings and structures, and their relationship to one another and to the landscape.

Land Use

The land has traditionally been used for recreation, contemplation and enjoyment of nature and wildlife. Historically the property was part of the White Grass Ranch, and was used for pasturing horses as well as hiking and horseback riding. When the property was purchased by William Balderston II in 1952, the primary use changed to a vacation property, providing a natural setting in which to retreat from urban life, and providing opportunities to educate visiting family members and friends about appreciation and respect for nature. A small portion of the land was converted for residential use, and another, smaller portion of the land was converted for keeping horses. Features relating to land use on Sky Ranch include the cabins, with their front porches and/or patios oriented for the best view of the mountains and wildlife movement; the horse barn and corrals, and riding and hiking trails. Human impact on the land has been kept to a minimum, demonstrating the primary use of the property as a place to gather, think, read, observe, walk and talk, as opposed to more active uses of the land. At the time this nomination was written, the use of the property had not changed since it was purchased in 1952.

National Register of Historic Places Continuation Sheet

Section No. 7 Page 3

Sky Ranch Historic District, Moose, Teton County, WY

Cultural Traditions

The Sky Ranch was built in the tradition of a family retreat, which offered a simple yet comfortable living space in which family and friends could immerse themselves in the natural environment. The property continued a long American tradition of creating an escape from the noise and stress of urban or suburban life, to a simple life consisting of activities such as conversation, writing, working outdoors, horseback riding, wildlife watching and just resting in a natural environment. In this tradition, changes to the natural landscape are kept to a minimum.

In design and siting, the buildings on Sky Ranch follow the traditional concept of Rustic architecture in the West, with local materials (log and stone), crafted in a traditional manner to imitate the pioneer structures of Jackson Hole and the West. The form of the buildings follows the ranch tradition, as described in the *Grand Teton National Park Multiple Property Submission (GNTP-MPS, E 33)*. Also inherent in the Rustic tradition is the effort to meld the buildings with their surroundings, something that was successfully achieved at Sky Ranch.

Four generations of the Balderston family and hundreds of guests have adhered to these traditions over the more than 50 years of ownership. This is evident in the buildings and structures, including barns and corrals, which have been meticulously maintained and cared for, and the well used hiking and riding trails which illustrate the continued use of the land for outdoor recreation.

Topography

The topography of the site is gently sloping from west to east, from the mountain forests to the sagebrush flats. Elevation rises to 6,800 feet along the western property line, and drops to 6,720 feet at the eastern boundary. Historic adaptations to the topography are limited to slight terracing to create a level surface with good drainage for the three main cabins, all of which are built along the contour of the slope. Below (to the east of) the cabins, the topography gradually flattens out, and turns into sagebrush meadow and pastureland. The barn and corrals are tucked into a natural meadow surrounded by Douglas firs on the northeast corner of the property. The positioning of the barn in this way hides it from the views of each of the aforementioned structures. No significant change to the historic adaptations of the topography has occurred.

Vegetation

Vegetation is almost entirely native and natural. The western part of the property, along the slope leading off of Buck Mountain below the Valley Trail, has a mix of old and new growth Douglas fir and a few sub-alpine fir. Aspen trees and a mix of sub-alpine shrubs, sedges, flowers, and grasses grow in the wet, spring-fed meadow in the central part of the uphill side of the property between the Grand cabin and the Valley Trail. The major portion of the southeastern section of the property (in front of the Grand cabin and Aunt Hill cabin) is a sagebrush meadow which leads into the traditional pasture lands of the White Grass Ranch beyond the district boundary. The northeast portion of the property below the Sky Bunk cabin is a Douglas fir forest and a small rocky meadow leading down to the barn and corral area. The horse trail along the north side of the property

National Register of Historic Places Continuation Sheet

Section No. 7 Page 4

Sky Ranch Historic District, Moose, Teton County, WY

follows a forest of large Douglas firs, near the edge of the spring-fed meadow. Native flowers such as Columbine have been planted around the Grand cabin and the east side of the Aunt Hill cabin, and a small garden space exists on the south side of the Aunt Hill yard. Large Douglas fir stumps, remnants of beetle-killed trees which were removed in the 1980s, are present on the western slope between the back patio of the Grand cabin and the spring-fed meadow. The following landscape features are important to the historic integrity of the property: 1) stands of Douglas fir and aspen; 2) the sagebrush meadow; 3) the spring-fed meadow.

Circulation

Sky Ranch is accessed from the Moose-Wilson Road, a paved secondary road that connects Moose with Teton Village and Wilson on the west bank of the Snake River. Approximately three miles south of Moose, the Death Canyon Road heads west off of the Moose-Wilson Road. A buck and rail fence along the north side of the Death Canyon Road defines the historic boundary of the White Grass Ranch property, approximately one mile up the road. Where the buck and rail fence begins there is a gate indicating the entrance to the White Grass Ranch. Beyond the gate, the dirt road to White Grass forks off to the left, while the road on the right leads to Sky Ranch. This road traditionally connected important area dude ranches, the Trail Ranch and the White Grass Ranch. Trail Ranch has been removed and what remains of the historic White Grass Ranch is visible from the Sky Ranch road.

The dirt, two-track road follows the eastern edge of the White Grass pasture approximately one mile. At the end of the pasture the road forks and a small sign reading "Sky Ranch" marks the left fork. About ¼ mile up this road is the entrance to Sky Ranch.

The circulation systems within Sky Ranch are simple, minimal, and designed to have least amount of impact on the view shed and setting. The road leads between the Douglas fir stand to the north and the sagebrush meadow to the south. About 100 feet past the ranch gate, a two-track road branches off to the right into the forest, leading to the barn and corrals. The main road leads to a parking area north of the Grand cabin. A guest parking area is demarcated by logs northeast of the Grand cabin, in the sagebrush meadow. A less well defined road continues north, passes the Sky Bunk cabin, then turns east heading downhill to the barn and corrals. It meets with the aforementioned turn-off, creating a loop. A culvert exists near the parking area north of the Grand cabin.

A horse trail leads from the two-track road near Sky Bunk cabin west to the Valley Trail. A game trail crosses the property from north to south about halfway up the hillside between the cabins and the Valley Trail. Dirt walking paths, and paths paved with log ends buried in the ground, connect the various buildings. Evidence of an abandoned two-track is visible from the ranch gate through the sagebrush meadow and leading to the Aunt Hill cabin. The following landscape features are important to the historic integrity of the property: 1) the entrance road and the two-track road leading to the barn; 2) the horse trail from Sky Bunk cabin to the Valley Trail; 3) the dirt walking paths connecting the buildings.

National Register of Historic Places Continuation Sheet

Section No. 7 Page 5

Sky Ranch Historic District, Moose, Teton County, WY

Buildings and Structures

Buildings and structures on the property are related to either domestic or agricultural land uses. The domestic cluster consists of three cabins, a combination tool shed-servants' cabin, a bathhouse, and a cistern. The agricultural cluster includes a barn and adjoining corral. All buildings and structures are individually described below. The following buildings and structures are important to the historic integrity of the property: 1) Grand cabin; 2) Aunt Hill cabin; 3) Ray and Anna's cabin; 4) the bathhouse; 5) the cistern; 6) the barn; 7) the corral.

Views and Vistas

The visitor's first view of Sky Ranch is traveling north on the Sky Ranch road and looking west across the historic White Grass Ranch pasture. This view encompasses not only the pasture and Sky Ranch, but also spectacular views of Buck Mountain. When one turns west onto Sky Ranch, the vista of pasture in the foreground, with Death Canyon and Buck Mountain in the background, dwarfs the unassuming buildings nestled on the edge of the Douglas fir forest. The sage-gray log structures, arranged linearly following the natural topography of the property, blend in well with the sagebrush meadow in front of them.

The buck and rail fence and ranch gate with the Sky Ranch logo provide a rustic introduction to this rural setting. Landscape changes have been kept to a minimum, and much of the natural vegetation remains undisturbed.

From interior and east-facing porches and patios of the Grand, Aunt Hill and Sky Bunk cabins, close to 180-degree views and vistas exist, encompassing the sagebrush meadow, buck and rail fence, White Grass pasture, Snake River valley, Blacktail Butte and the Gros Ventre Range. Looking west from the interior and west-facing patio of the Grand cabin, views of the sub-alpine aspen and Douglas fir forest lead the eye to the view of Buck Mountain towering above the trees. The following landscape features are important to the historic integrity of the property: 1) the buck and rail fence and ranch gate with the Sky Ranch logo; 2) the view east-southeast from the cabins, of the White Grass pasture, Snake River valley, Blacktail Butte and the Gros Ventre Range; 3) the view of Buck Mountain to the west.

Constructed Water Features

The water catchment system at Sky Ranch provides water to both the domestic buildings and the barn, and feeds a small pond used for irrigation and fire suppression purposes. The system begins at a spring (Balderston Spring) located in the northwest corner of the property. A 2-foot-long steel plate dams water in the small spring. Under the steel plate is the beginning of a 3-inch diameter, plastic pipe. A valve is attached to the pipe to control the water entering the system. The pipe is buried as it travels down hill towards the catchment system, and is marked on the surface by steel posts and small blue markers nailed to aspen trees. The catchment system consists of a plastic tub that is placed in the stream bed, into which water flows from the abovementioned spring, as well as from a smaller spring to the north. A single plastic pipe leaves the downhill side of the tub and continues downhill to the 5,000-gallon concrete cistern, entering the cistern at the southwest corner, just below the gabled roof eave. After leaving the 3-by-3-foot filter structure adjacent to the cistern, the

National Register of Historic Places Continuation Sheet

Section No. 7 Page 6

Sky Ranch Historic District, Moose, Teton County, WY

pipe is buried as it leads downhill to a set of concrete boxes with metal tops, one containing valves controlling water to the different structures, another containing an electric pump and heater. The pump is used to increase water pressure in case of fire. About 200 feet of fire hose is located at this pump.

The underground pipe runs along the south side of Ray and Anna's (servants') cabin to two underground shut-off valve boxes near the edge of the cabin. It then continues downhill to a box in the center of the driveway, which contains a shut-off valve. Finally the pipe continues in a northeasterly direction above and below ground to a final spigot on the property's east edge near the corral and barn. This final spigot provides water for the horses.

A second spring begins near the southern side of the property behind the Grand cabin. This spring forms Bee Wee Creek, which follows around the north side of the Grand cabin and flows into a small concrete pond just east of the structure. A small bridge passes over this on a path connecting the Grand cabin with the buildings to the north. The pond was traditionally used for irrigation and fire prevention, as well as a place for children to float boats and practice fly casting. Below the pond the water continues in a ditch, passes under the driveway through a culvert and follows its natural course downhill. The following landscape features are important to the historic integrity of the property: 1) the water catchment system as described above; 2) the cistern and attached filter structure; 3) the valve and electric pump/heater boxes; 4) below-ground spigots; 5) Bee Wee Creek; 6) the pond; 7) the bridge over Bee Wee Creek.

Small-scale features

Small-scale features on Sky Ranch consist of typical ranch features such as fences, gates, corrals and trails, as well as features relating to the property's use as a vacation home. Small-scale features add to both the rustic and the recreational feel of the property.

A simple log gateway with a sign sporting the Sky Ranch logo, flanked by buck and rail fencing, marks the entrance to Sky Ranch. A cattle guard crosses the road at the gateway. The entire property was originally bounded with buck and rail fencing, but only the fencing along the south and east boundaries, which was repaired in 1997, remains intact. A round, concrete marker with the Sky Ranch logo is set in the ground marking the northeast corner of the property, near the corral. Behind the Grand cabin, a game trail passes from north to south, past a salt lick located about 30 feet west of the structure. A power line cuts approximately north-south across the property west of the Grand cabin, as does a wire fence with steel posts. At the northwest corner of the property, a log gate connects Sky Ranch with the Valley Trail.

Domestic and recreational small-scale features include a wooden swing which hangs from a pole attached to two large Douglas fir trees across the driveway from Ray and Anna's Cabin, and a tree fort located along the trail leading from the Sky Bunk cabin to the Valley Trail. The tree fort was built in the late 1980s, of logs nailed to six trees, creating a polygon. Plywood is used as decking and a two-log railing runs around the edge. The fort is accessed by a log ladder with rungs nailed to small fir trees. A small bridge, constructed of 3-inch-

National Register of Historic Places Continuation Sheet

Section No. 7 Page 7

Sky Ranch Historic District, Moose, Teton County, WY

diameter logs with a railing on one side, crosses Bee Wee Creek, linking the Grand cabin with the buildings to the north.

A 20-by-24-foot patio/barbeque area is located downhill from the Grand cabin. The patio is constructed of log ends buried in the ground, and matches the west patio of the Grand cabin and the front patio of the Sky Bunk cabin. A low, metal fireplace/grill sits on a brick base at the northeast corner of the patio. Paths constructed of log ends spaced 6 – 10 inches apart lead from the rustic bridge to the north porch of the Grand cabin, around the north side of the Grand cabin to the front porch, from the guest parking area to the terraced lawn in front of the Grand cabin, and between the front porch of the Grand cabin and the Aunt Hill cabin.

The following landscape features are important to the historic integrity of the property: 1) Sky Ranch gate and sign; 2) buck and pole fencing; 3) concrete marker; 4) salt lick; 5) gate connecting Sky Ranch with the Valley Trail; 6) the bridge across Bee Wee Creek; 7) the patio/barbeque area; 8) log-end paths.

Archeological Sites

No known archeological sites exist on this property. The property needs to be surveyed.

Individual building descriptions

1. The Grand (1953) - Contributing

“The Grand,” the main cabin and first building constructed on the property, was built in 1953 and sits near the center of the lot between the Aunt Hill cabin and Ray and Anna’s cabin. The Grand’s (and other residential buildings’) orientation to the southeast will be simplified to “east” for purposes of this description as this better reflects the ranch’s setting between the major landmarks of the Tetons to the west and the Snake River valley and Gros Ventre Range to the east. The cabin is situated in a meadow on the eastern edge of a grove of aspen, Douglas fir and lodgepole pine. It is visible from the Sky Ranch road and the front gate through several trees. It rests on a slightly terraced lawn with a log retaining wall on the east end, and a rock and soil retaining wall on the south, with log-end stepping stones and three half-log steps leading up to it from the meadow below.

The Grand cabin is a one-story, 1,650-square-foot, log building, rectangular-shaped with a 10-foot-wide projection at the southwest corner and a 5-foot-wide projection at the northeast corner. The building sits on a low, poured-concrete foundation which narrows from 3 feet at the front of the building to one foot at the rear as a result of the natural slope of the land. The walls are 10-inch-diameter peeled logs, stained a sage-gray color with saddle notching on both sides. Log joints are chinked with shredded redwood bark, topped by quartered lodgepole pine strips carefully scribed for a tight fit. The log ends are hewn to a point in alternating orientations. There is a large (14-by-30-foot) front porch located approximately in the center of the façade, with timber steps, 2-by-6 board decking and three log posts and log beams supporting a shed roof which extends approximately half the width of the porch.

National Register of Historic Places Continuation Sheet

Section No. 7 Page 8

Sky Ranch Historic District, Moose, Teton County, WY

Windows are casements, trimmed in wood molding with lug sills, and have functional tongue-and-groove board shutters with strap hinges and interior metal screens, except where noted. The façade consists of 5 bays, with openings as follows (from S to N): two pairs of eight-light casement windows, a large picture window flanked by single, 10-light casement windows without shutters, the front entrance, and a pair of smaller, six-light casement windows in the projection at the north end. The entrance is a Dutch door constructed of tongue-and-groove pine, with cross supports and top and bottom strap hinges, with a wood screen door and plain wood trim. Six joist ends, hewn to points, extend over the windows on the south end of the façade.

The south elevation has four, evenly spaced, eight-light casement windows on the main floor, and a 3-over-3, double-hung attic window with exterior screen in the gable end.

The west elevation has (from S to N) two pairs of eight-light casement windows in the projecting section (there is also a single, eight-light casement window on the north elevation of the projection), a large picture window flanked by single, eight-light casement windows without shutters, a pair of six-light casement windows and a single six-light casement window. There is a Dutch door identical to the front door located to the south of the picture window. A 250-square-foot back patio, constructed of log ends buried in the ground, runs in front of the picture window and door. There are six hewn joist ends over the windows in the projecting section, corresponding to those found on the façade.

The north elevation has (from E to W) one pair of eight-light casement windows, a single six-light casement window without shutters, and a Dutch door identical to the front door in the west bay. There is an opening in the gable end, similar to the one found on the south elevation, which has been boarded up. A shed roof, supported by two log posts and a log beam, shelters a 7-by-12-foot porch with a log railing, board decking and half-log steps, which leads to the north (kitchen) door.

The eave-front, low-pitched gable roof is sheathed in silver-gray, standing-seam metal roofing, which was installed over the original cedar shingles in the 1990s. An intersecting gable tops the projection at the southwest corner. The roof has exposed rafter tips with sawn ends on the eave sides, and exposed purlins and ridge poles with hewn tips in the gable ends. A narrow metal fascia extends around the perimeter of the roof, protecting the log ends from water and snow run-off. There are two chimneys, a large one on the front slope of the roof and a smaller, exterior one on the west elevation. Both are constructed of native stone, laid flat, with concrete mortar.

The interior floor plan includes a living/dining room, kitchen, four bedrooms, a den and three baths. The log walls serve as interior as well as exterior finish, with quarter-cut lodge pole chinking nailed in place. The interior face of the logs is stained and varnished to a golden brown. Interior partitions are wood frame, finished in knotty pine paneling. Floors are oak, except the kitchen which has vinyl flooring, and the bathrooms which are floored with linoleum. Purlins, rafters and joists are peeled, round logs, and ceilings are paneled in knotty pine. Exterior doors are Dutch style, made of three layers of tongue-and-groove pine, with 3-foot-long, wrought-iron, strap hinges, and wrought iron latches. Interior doors are of the same construction, but one piece,

National Register of Historic Places Continuation Sheet

Section No. 7 Page 9

Sky Ranch Historic District, Moose, Teton County, WY

and also have wrought-iron latches and hinges. Windows and doors are trimmed in plain pine boards. A pull-down staircase in the hallway at the south end of the cabin leads to an attic which is unfinished except for a cedar closet.

The living room has a cathedral ceiling with exposed ridge beam and purlins. A massive, 15-foot-long stone wall with large fireplace and stone hearth dominates the room. The half-log mantle is supported by protruding rocks. A chandelier made of a 6-foot-long half log hung from the ridgepole on one-inch chains lights the interior of the living room. The cabin is furnished with oriental rugs and rustic log furniture that matches its Rustic-style architecture.

The Grand cabin is in excellent overall condition due to the quality of the original construction and continuous use and maintenance by the owners.

2. Aunt Hill (1953) - Contributing

Approximately 50 feet south of the Grand cabin, situated on a small rise, sits the Aunt Hill cabin, built for Bill Balderston's two unmarried sisters. The cabin rests on a low, poured-concrete foundation, on a slightly terraced lawn built up with rocks and soil on the north and east sides. Stone steps with a log handrail lead to the cabin from the meadow below. Aunt Hill looks east across the meadow to the Gros Ventre Range. The one-story, 22-by-28-foot cabin is rectangular in plan and is capped with an eave-front gable roof. The construction, including peeled-log walls, corner notching, quarter-round chinking, and hewn log ends, matches that of the Grand cabin.

The asymmetrical facade contains three bays. A Dutch door, matching that of the Grand cabin and stained sage-gray to match the logs, occupies the central bay and is flanked by a large picture window to the south and a single six-light casement window with shutter to the north. A wood frame screen door hangs on the outside. A shed roof with exposed, sawn rafter tips extends from the east slope of the main roof to shelter a 9-by-16-foot porch with a wood deck. Two log posts and a log beam support the porch roof.

A chimney of locally quarried stone laid in a regular pattern rises up along the south wall, with a pair of eight-light casement windows to the east, and a single eight-light casement to the west. All windows on this elevation have functional tongue-and-groove board shutters with strap hinges that match those of the Grand cabin. The west elevation contains paired, eight-light casement windows with shutters flanking a central six-light window without shutters. On the north elevation are two, single, eight-light windows, each with a shutter, and a window in the gable end covered with a stationary shutter.

The roof is sheathed in silver-gray, standing-seam metal roofing, which was installed over the original cedar shingles in the 1990s. It has exposed rafter, ridgepole and purlin tips matching those of the Grand cabin.

The interior of the Aunt Hill cabin is similar in style and materials to that of the Grand cabin, with oak floors, log walls and interior partition walls of knotty pine. It contains a living room with a cathedral ceiling and a

National Register of Historic Places Continuation Sheet

Section No. 7 Page 10

Sky Ranch Historic District, Moose, Teton County, WY

large, corner fireplace, two bedrooms, a bathroom and a small kitchen with a sleeping loft above. The cabin is in excellent condition.

3. Ray and Anna's Cabin (1953) - Contributing

Ray and Anna's Cabin (servants' cabin), located approximately 35 feet north of the Grand cabin, is a one-story, L-shaped building, consisting of a 22-by-12-foot living quarters with a 17-by-12-foot tool shed addition. The building faces south with the addition extending back from the northwest corner. Like the Grand and Aunt Hill cabins, the cabin section is built of peeled logs, stained a sage-gray, chinked with quartered lodgepole pine over shredded redwood bark, with saddle notched corners terminating in hewn ends. The addition is a wood-frame structure with log-faced lap siding.

The building rests on a low, poured-concrete foundation. The 3-bay facade consists of a central door flanked by double, six-light, casement windows, one slightly offset to the west. Windows match those of the Grand cabin, except that they are trimmed with dimension lumber instead of molding. The Dutch door and the window shutters match those of the Grand and Aunt Hill cabins. The western window has a pair of shutters while the eastern one has just a single shutter. The west elevation consists of a double casement window, which has been covered with a log-sided, stationary shutter. A single casement window lights the north elevation, and the east elevation has no openings. The living quarters is topped by a medium-pitched, eave-front gable roof, sheathed in cedar shingles, with every seventh row doubled for texture, with exposed, sawn rafter tips. Exposed purlin and ridgepole tips are hewn to points.

The 17-by-12-foot, gable-roofed tool shed addition extends to the north, following the west wall of the original cabin. The entrance to the addition is on the east (eave) elevation, at the south end. The door is a Dutch door constructed of vertical boards, like that of the living quarters. A shuttered casement window is on the north elevation, and a shuttered stationary window is on the west. On the east elevation, the eave extends slightly to shelter a narrow (2-foot-wide) porch with a poured-concrete deck. Three log posts and a log beam support the porch roof. The roof is finished to match that of the living quarters. A 30-foot-long, 6-foot-high fence made of vertically placed, split lodge poles runs in front of the building on the east, screening the tool shed from view of the road.

The interior of the cabin consists of one sleeping/living room with a bathroom and closet. Floors are wood, and walls and ceilings are finished in knotty pine paneling. The tool shed is a single room with a concrete floor and exposed-stud walls. The building is in excellent condition.

4. Bathhouse (c.1953) - Contributing

The bathhouse was originally built to house a generator for supplying electricity to Sky Ranch. Once electricity was brought in, and the generator was no longer needed, the building was converted to a bathhouse. The bathhouse is a square, 7-by-7-foot, wood-frame structure resting on a low, poured-concrete foundation, with 10-

National Register of Historic Places Continuation Sheet

Section No. 7 Page 11

Sky Ranch Historic District, Moose, Teton County, WY

inch-wide, wood plank, lapped siding. There is a single, vertical-plank wood door with a plain wood frame on the east elevation, and a slightly smaller, double, vertical-plank wood access door on the west. The steep-pitched gable roof is sheathed with cedar shingles with every seventh row doubled for texture, and has exposed rafter tips. A vent pipe extends from the north slope of the roof, near the ridge. The interior has exposed-stud walls and a concrete floor, and houses a shower stall, toilet and sink. The bathhouse is in excellent condition.

5. Sky Bunk (c.1969) – Non-contributing due to age

Sky Bunk sits about 100 yards northwest of the Grand cabin, and faces directly east. The one-story, gable-roofed, 40-by-30-foot kit home is constructed of pre-cut, milled, tongue-and-groove cedar logs, and rests on a low, poured-concrete foundation.

The standard window in this building is a casement of three horizontal lights, with plain wood surrounds and a wood lug sill. The asymmetrical facade is composed of three bays. A pair of standard windows makes up the south bay, followed in the center bay by a trio of standard windows. Functional shutters composed of vertical wood planks accompany each window. An aluminum-frame, sliding glass door completes the north bay. A 12-by-10-foot patio composed of log ends buried in the ground lies in front of the sliding glass door.

A pair of standard windows with vertical wood-plank shutters lights the east portion of the south elevation while a Dutch door occupies the west end. The door is wood with a nine-light window in the top half. A wood frame projects from the doorframe to hold a screen door. The west elevation consists of a pair of standard windows in the south end, followed by a single, three-light, casement window with textured glass. To the north there is a double, two-light casement window and a large picture window. Standard shutters flank all casement windows on the west elevation except for the single three-light casement, which has a single adjoining shutter.

Two pairs of windows, each with a set of shutters, light the north elevation, one on either side of a central chimney. Faced in rustic red stone, the chimney protrudes 2.5 feet from the building and is 8 feet wide. It rises from the ground and tapers two-thirds of the way up to form a square approximately 3-by-3 feet, with a screen cap covering the stack.

A low-pitched gable roof, clad in red asphalt shingles, caps the building. The perimeter of the roof is finished with a wood fascia over exposed purlin and rafter tips. Some of the shingles are worn or torn; otherwise the cabin is in very good condition.

6. Cistern (1953) - Contributing

The cistern is a 30-by-10-foot, poured-concrete water storage structure, with a capacity of approximately 5,000 gallons. A gable roof tops the concrete walls, which are partially buried in the ground on the west side. The roof is covered with green asphalt shingles, and finished on the gable ends with a wood fascia board. North and south gable ends are sided with vertical siding, with 2-by-2-foot screened openings. A 3-inch-diameter water pipe enters the cistern at the southeast corner, just under the eave. An overflow pipe extends from the south wall. A small box housing a water filter, with a concrete foundation and flat metal top, extends east at the

National Register of Historic Places Continuation Sheet

Section No. 7 Page 12

Sky Ranch Historic District, Moose, Teton County, WY

southeast corner, and a 200-gallon-capacity tank sits just to the north of the filter box. The cistern is in good condition, although a few of the asphalt shingles on the east slope of the roof are missing.

7. Barn (1953) - Contributing

The barn is a one-story, rectangular-shaped wood-frame building, approximately 16-by-38-foot, located in the northeast corner of the property. It sits on a flat area down the hill to the east of the Sky Bunk cabin and is oriented to the north. It rests on a low, stone and poured-concrete foundation which, like the foundations of all buildings on the ranch, narrows at the up-slope side of the structure. The walls are sheathed with 12-inch-wide, horizontally overlapping wood planks, stained brown.

The barn consists of a central, 20-foot-wide, open loafing area with dirt floor, flanked by two enclosed rooms, a tack room and a feed storage space. The side rooms are accessed by single, vertical-slab wood doors with plain wood frames on the north elevation, and double, wood doors on the south elevation. The east and west elevations both have two, four-light, fixed-pane windows with plain wood frames.

The barn has a medium-pitched gable roof covered with silver-gray, galvanized metal roofing, with a shed-roof extension at the back (south). Ridgepole and sill beams extend on the gable ends, and rafter tips are exposed. The barn is in good condition.

8. Corral (1953) – Contributing

A two-rail, buck-and-rail fence encloses a corral in front of the barn, which is divided into two connected sections, the first being roughly rectangular in size with a gate on the west side, and the second being rounded. The corral is in good condition.

STATEMENT OF INTEGRITY

Sky Ranch possesses remarkable integrity of materials, workmanship, design, feeling, association and setting. The setting has not changed since the property was acquired in 1952. All of the buildings have excellent integrity in terms of materials, workmanship and design. The design of the buildings to blend into the landscape is readily apparent. The property possesses the feeling and association of a mid-20th century vacation retreat.

Narrative Statement of Significance

Summary

The Sky Ranch Historic District is eligible for listing in the National Register of Historic Places at the local level, with significance in history and architecture (criteria A and C). The district's period of significance begins in 1952, when the site was purchased, and extends to the present. Its use and physical appearance, including landscape and associated features, have remained virtually unaltered since 1953, when all but one of the buildings were constructed.

The Sky Ranch Historic District is significant as a vacation home under Criterion A and the "settlement context" as defined in the *Grand Teton National Park Multiple Property Submission (GTNP – MPS)*. Sky Ranch is significantly associated with the settlement context, representing the later period of settlement of the Snake River valley, when families who had spent time at dude ranches and/or friends' vacation homes in Grand Teton National Park purchased property for themselves. It is an excellent example of a post-World War II, vacation property, developed in 1952-53, after the creation of Grand Teton National Park (GTNP). Unlike the other National Register-listed vacation homes in GTNP, such as the AMK Ranch and the Brinkerhoff, this property is a simple, rustic, family retreat, rather than a place to entertain and impress guests.

Additional areas of significance include entertainment/recreation, social history, and conservation. Sky Ranch functioned primarily as a place for family entertainment and recreation. However, the owners were also active in the social life of GTNP and Jackson Hole, and counted among their friends many well known people in the area, including ranchers, dude ranchers and vacationers. In both its design and its use, Sky Ranch is a manifestation of the conservation ethic as practiced not by scientists but by private individuals with a great love and respect for nature.

The extensive documentary material relating to Sky Ranch also contributes to the significance of the property. Original owner William Balderston II was an avid photographer and committed diarist throughout his life, and he thoroughly documented his family's summertime activities, and visits with friends. The construction of Sky Ranch, its use as a place for recreation and family gatherings, and its role in the social history of GTNP in the mid-1900s, are well documented in diaries, photographs, 16 mm movies, business records and the personal memories of the heirs of William Balderston II.

Sky Ranch is also eligible under Criterion C, as an excellent and well preserved example of a Rustic style vacation home, designed by a prominent Philadelphia architect.

As a cultural landscape, the Sky Ranch Historic District contains a very high degree of integrity. Photographs taken in the 1950s show the site much as it appears today, with the only addition being the Sky Bunk cabin in

National Register of Historic Places Continuation Sheet

Section No. 8 Page 14

Sky Ranch Historic District, Moose, Teton County, WY

c.1969. The Balderston family has continued to use the property in the way it was envisioned by the original owner, William Balderston II, continuing a family tradition for more than 50 years.

Criterion A

Background

William Balderston II first came to the Snake River valley in May 1914, when he was hired to work as a surveyor on the engineering crew for the Jackson Lake Enlargement Project. A skillful amateur photographer, Balderston was soon assigned to be the official “progress photographer” for the project, in addition to his surveying duties.

After spending two years in the valley, Balderston left Jackson Hole for the University of Wisconsin where he earned a degree in civil engineering. The magic of the Tetons had captured his imagination, however, and he always dreamed of returning to the valley. “I will never forget my first view of the magnificent Teton Range as we made our way up the valley in wagons [from Victor, Idaho],” he told a reporter for the *Jackson Hole Guide* in 1973. His work on the Jackson Lake dam gave him an opportunity to fish, hike, ride horses, canoe and pursue other outdoor interests on weekends, the start of what would be a life-long love of the outdoors.

Balderston went on to have a successful career as an engineer, pioneering the use of the radio in cars, and radar in airplanes. He worked his way up in the electronics industry, starting work for his father-in-law at Ray-O-Vac and joining Philco Corporation in 1930. He became executive vice president of Philco in 1946, and served as president from 1948 until his retirement in 1957. For his role in developing and mass producing large quantities of advanced airborne radar and other electronic equipment during World War II, Balderston was awarded the Certificate of Merit by President Truman in 1947.

Throughout his successful career, Balderston never forgot his early experience in the Tetons, and he returned to the Jackson area often with his wife Susan and their four children. When visiting the Jackson area, they often stayed at the White Grass Ranch, owned by fellow Philadelphian Frank Galey. Galey introduced the Balderstons to many regular summer people in GTNP, who became part of the Balderston’s wide circle of friends.

On a visit to the White Grass Ranch in 1952, Balderston persuaded Galey to sell him “five acres of the northwest section of the White Grass, the area to be picked by you [Balderston], for the sum of \$5,000” (Balderston Collection, Galey file). This property was named Sky Ranch, for what his wife called Bill Balderston’s 35-year “dream in the sky” of owning property in the valley. The original 5-acre parcel was expanded to 13.66 acres the following year, to allow room for a small barn and corral.

National Register of Historic Places Continuation Sheet

Section No. 8 Page 15

Sky Ranch Historic District, Moose, Teton County, WY

Construction of Sky Ranch

Soon after his purchase of the property, Balderston hired Philadelphia architect John Arnold Bower to design a small complex of buildings, where the family could gather in the summers. He hired Jackson contractor Jack Kranenberg to construct the buildings, and paid Frank Galey \$500 to oversee the project.

Bower designed, and Kranenberg built, three main buildings: the main cabin, known as the "Grand," a small cabin for Balderston's two unmarried sisters, known as "Aunt Hill," and a combination living quarters and tool shed for Balderston's employees, a German couple named Ray and Anna Braitinger and their daughter Marlicia, known as "Ray and Anna's Cabin." A bathhouse was also built just to the north and west of the Grand cabin, and a barn and corrals were constructed in the far northeast corner of the property. In 1969, a log kit-home was constructed to the north of the other buildings, to accommodate Balderston's growing family. This cabin is known as "Sky Bunk."

Bill Balderston's involvement in the construction of Sky Ranch is documented in his correspondence with Frank Galey and Jack Kranenberg. His Philadelphia architect specified certain things, such as 18-inch below grade foundations and a high load-rated roof, which Kranenberg thought were unnecessary, but Balderston insisted upon. At one point Balderston complained about the height of the foundation. "I don't think it ought to be so high up in the air," he writes to Frank, "be sure that he keeps the house down just as low as possible" (Galey file, 9/22/52).

A primary goal of Balderston was to avoid disturbing the beauty of the site, and this is apparent both in his correspondence and in studying the landscape of the site today. Cabins were sited on the hillside where forest gives way to meadow, to avoid cutting down trees. A minimum amount of land was disturbed in the process of building. A small area was scooped out with a backhoe, and the dirt spread out to form a terrace slightly larger than the building. Each building was sited to face east/southeast, with a view of the Gros Ventre Range and the meadows of the White Grass Ranch in the foreground.

This conservation ethic extends to the entire site. Very little disturbance of the natural landscape is evident. Domestic plantings are confined to small grassy plots surrounding the cabins. A single road leads from the gate to the cabins and loops around to the barn and corrals, and only a small number of social trails traverse the property.

Settlement

Sky Ranch is representative of the shift in land values that defined the 20th century economy of the scenic West: "beauty, wildness, and rustic relics of our Western heritage (both real and contrived) have replaced abundant land, abundant graze and fertile soil as Jackson Hole's primary economic assets" (*GTNP-MPS*, E 31).

National Register of Historic Places Continuation Sheet

Section No. 8 Page 16

Sky Ranch Historic District, Moose, Teton County, WY

As described in the Grand Teton National Park Multiple Property Submission,

Attracted to the unspoiled scenery, the abundant hunting and fishing, and relative isolation the Rocky Mountains afforded, many affluent visitors came to the mountains and nearby valleys to vacation during the summer months. While some invested in lands with the intention of developing them into operating ranches, farms or mines, others simply bought the land for its real estate value or to build vacation homes....The railroad and then the automobile transported increasingly large numbers of seasonal visitors to the Rocky Mountain West, in search of a sportsman's adventure or a relaxing and healthful vacation. Few were disappointed. A significant number returned to compete for the ownership of dwindling supplies of public domain (E 18).

Sky Ranch represents the later settlement of the Jackson Hole area, which was (and still is) largely a result of seasonal visitors who fall in love with the landscape, scenery and romance of the West. Bill Balderston II was a former worker in the valley who returned as a dude rancher and vacationer, and eventually acquired property of his own. Attracted during his youth by the beautiful scenery, the wildlife and the recreational opportunities in Jackson Hole, he held the dream of returning and owning property in the valley for almost forty years. By building Sky Ranch, Balderston became part of a settlement pattern that shaped Jackson Hole in the 20th century.

Use of Sky Ranch

Entertainment/recreation

Sky Ranch is representative of the culture of dude ranching and vacationing in Grand Teton National Park. Like GTNP itself, it was a place to conserve and enjoy nature, and to share that experience with friends and family. Like thousands of other people, Bill Balderston II harbored a life-long dream to live in the Jackson Hole area. Like many of his contemporaries in the valley, he became a successful businessman and eventually acquired the means to realize his dream. But unlike many of his contemporaries, he was less interested in building a showplace to entertain friends, and more interested in building a simple retreat for his family. Following the trend of vacation homes in GTNP, Sky Ranch was designed to be used only in the summer, although family members occasionally stayed at the Ranch over Christmas vacation.

Balderston envisioned Sky Ranch as a place where his growing family could gather in the summers, to reconnect and to share in the enjoyment of nature. In his letters to Frank Galey in 1952, he talks about his anticipated use of the ranch. He looked forward to sharing his love of the outdoors and appreciation of nature with family and friends. "I have the whole Balderston family taking riding lessons this winter...we have also started shooting clay pigeons every Sunday so we can get our shooting eye sharpened up for those sage hens" (Galey file, 11/17/52).

National Register of Historic Places Continuation Sheet

Section No. 8 Page 17

Sky Ranch Historic District, Moose, Teton County, WY

The use of the property is well documented in Balderston's diaries which he kept daily while at the ranch, and in letters written to him by his children, grandchildren and friends who visited Sky Ranch. Typical of the sentiments expressed is a letter from Bill Balderston III, written after a two-week visit to Sky Ranch. The letter contains a long list of memorable highlights of the visit, including fishing, hiking, horseback riding, cookouts, rodeo, an evening at The Wort, and "our walk in the evening down to the Trail Ranch meadow," a tradition still carried on by the family today. He also mentions the "great feeling of 'familyness' that there always is at Sky." He ends with a message that seems to sum up the use of the place. "It's great to be able to be with you at Sky each year, it gives us a chance to sort of renew acquaintances and re-establish our ties...Also for the kids, to have the opportunity to get to know their grandparents and hopefully learn some of your fine traits and attributes" (letter from Bill Balderston III to his parents, undated).

As indicated by the letter quoted above, summers at Sky Ranch were times to relax, enjoy nature, watch wildlife and reconnect with friends and family. Horseback riding, hiking, playing with kids, reading, talking – these quiet pursuits occupied most of the time. The buildings themselves, modest in size and simply furnished in a rustic style, reflect the desire for a simpler lifestyle that many 20th century American vacationers were looking for. A tool shed built on to Ray and Anna's Cabin provided family members with a small workshop for "handyman" projects such as building fences or swings for children, another manifestation of the activities of the "simple life." As was the custom for summer vacationers in Jackson Hole, the horses that were so important to life at Sky Ranch were not owned by the family, but rather were rented for the summer.

Education was also a part of life at Sky Ranch. Spending time in this environment, children learned about their family history, and learned to appreciate nature, quiet, and the simple pleasures of life.

Sky Ranch is also significant for its connection with White Grass Ranch, which is listed on the National Register of Historic Places. Sky Ranch was originally part of the meadow and forest lands of White Grass, and was purchased from White Grass owner Frank Galey five years before Galey sold most of his property to the National Park Service. The land transaction documents state that the owners and guests of Sky Ranch would have unlimited use of the White Grass facilities: a guest at Sky Ranch was considered a guest of White Grass. "Sellers agree to give buyer a written agreement that he, his family and his house guests shall have the use of the facilities of the White Grass Ranch (while it is owned by the present sellers) at their established rates" (Agreement for Warranty Deed, September 3, 1952). The Balderstons stayed at White Grass before and during construction of Sky Ranch, and White Grass was the place of choice for friends to stay when Sky Ranch was full. In effect, Sky Ranch provided additional guest space for the White Grass, while the White Grass provided additional recreation and entertainment opportunities for Sky Ranch guests.

Social history

The Balderstons were part of the 1950s social scene of dude ranchers, vacation home-owners and year-round residents in GTNP, especially the White Grass Ranch. Balderston's diaries paint a vivid picture of the cadence of summer life in GTNP, and document how people used places like Sky Ranch and White Grass Ranch.

National Register of Historic Places Continuation Sheet

Section No. 8 Page 18

Sky Ranch Historic District, Moose, Teton County, WY

Because it is virtually unchanged from the time it was built, Sky Ranch itself provides a glimpse into the environment in which these interactions took place.

At the end of a day of hiking, horseback riding or quieter pursuits, there might be cocktails on the porch, watching the wildlife and the sunset, long visits over dinner and perhaps an after-dinner walk, sometimes with the family, and other times with friends who figure prominently in the social history of the valley, such as Alfred and Madeleine Berol, Irving and Maggie Corse, Cliff and Martha Hansen, the Craigheads, Olaus and Mardy Murie, Frank and Inge Galey, The Bettys, the Dornans, Archie Teater and others. The assistance of the Balderstons' employees, Ray and Anna Braitingner, made these social events possible. Children were also recruited to park cars and otherwise help out.

Although he spent most of his adult life in Philadelphia, Bill Balderston II was one of a great many Easterners who were entranced by the Western lifestyle, as well as its beauty. While guests at the AMK Ranch were required to "dress" for dinner, guests at Sky Ranch were urged to shed their "Eastern clothes" soon after they arrived, and change into their "Western clothes." Balderston and his Philadelphia friends who visited him at Sky Ranch, or stayed at White Grass Ranch, would get together during the winter to reminisce about their summer adventures and share photographs and home movies. Blue jeans and boots were required dress at these occasions.

Sky Ranch was built toward the end of the golden age of dude ranching, at a time when Americans had become less interested in spending a week or two, or even longer, at one place, and were opting instead for the greater freedom of automobile touring. It represents a type of vacation that was once common among the upper classes in the United States, but has become quite rare now. As Cindy Aron observes in *Working at Play*, the idyllic family retreat at the shore or in the mountains, where focus is on family and nature, is today increasingly disrupted by work; laptop computers, cell phones and faxes have invaded the peaceful environment. Most families are no longer able to schedule a two-week vacation, let alone a whole summer spent at a family retreat. Most vacation homes today are used for days, as opposed to weeks, at a time. Thus Sky Ranch represents a type of vacation that has become increasingly rare in American society.

Conservation

William Balderston II was not a scientific conservationist like his friends Olaus and Mardy Murie, but he loved and respected the wilderness, and hiked and packed into the backcountry from his youth until well into his 70s. His conservation ethic carried over to the construction of Sky Ranch.

The importance of conservation in the development and use of Sky Ranch is apparent both from historical sources and from observing the site itself. In his letters to Frank Galey, for example, Balderston expresses a conscious desire to keep the site as pristine as possible, and to keep the buildings from intruding on the view. The specifications for the Grand cabin state, "Care must be taken not to disturb or alter small stream running by building site." Materials were not wasted. The many log pieces and ends leftover from constructing the buildings were sawn to a uniform length and set in the ground as patio pavers and foot paths.

National Register of Historic Places Continuation Sheet

Section No. 8 Page 19

Sky Ranch Historic District, Moose, Teton County, WY

Unlike the AMK Ranch and Brinkerhoff, located in GTNP, Sky Ranch is a modest place, providing the minimum amount of room and comfort needed for the family and their friends. Sky Ranch can accommodate twenty-three guests at a time, with only 3,300 square feet of total living space, a tiny fraction of what would be found on a typical vacation property in the valley today.

At Sky Ranch, one has the sense of being *in* the landscape, as opposed to overlooking it. The design of the site reflects a philosophy of adapting the buildings to fit the land, rather than bending the land to one's needs. The buildings relate to the natural setting, in size, color, design and siting. They are sited at the lower edge of the forest, although placing them higher up might afford better views. Landscape changes are kept to a minimum; for example the outdoor cooking area is small, with paving made of log ends and a low, metal grill – unlike the large, stone barbecue structures found on many vacation properties in the valley. Water is provided by a water catchment system that utilizes existing springs with minimal visual impact on the natural landscape. Roads are undeveloped, with small culverts installed instead of re-routing streams. Most of the natural landscape has been left untouched.

Criterion C

Sky Ranch also meets the National Register requirements for significance as an example of Rustic architecture. As described in the GTNP-MPS, the Rocky Mountain Rustic style evolved from the pioneer vernacular, and is characterized by the use of native timber and stone, crafted by local craftsman using traditional techniques. “Rustic architecture represented the deliberate attempt – usually an architect's deliberate attempt – to convey historical images and to meld man-made resources with their wilderness environment” (*GTNP-MPS*, E 41).

Architect John Arnold Bower was a prolific designer of period homes in the Philadelphia area, and a personal friend of William Balderston. Sky Ranch was his only project outside of Pennsylvania and New Jersey; in fact, his first trip west of the Mississippi was to see the buildings he designed at Sky Ranch.

The Sky Ranch buildings imitate the vernacular style of Jackson Hole's early settlement period, 1884-1927, and can be identified as typical of the “ranch form” (*GTNP-MPS*, E 33). They are basically rectangular in plan, with low, eave-front gable roofs supported by log purlins and rafters, with exposed tips. They are constructed with local building materials (logs and stone), using traditional building techniques. Logs are saddle-notched and chinked with quarter-split lodgepole pine. The peeled, round logs serve as both exterior and interior walls.

The three original residential buildings, the Grand, Aunt Hill and Ray and Anna's cabins, were carefully crafted by a Norwegian crew under the supervision of contractor Jack Kranenberg, an experienced log builder who constructed many log structures in the Jackson Hole area, including the interior of the Million Dollar Cowboy Bar, the Rancher Bar, the Bridger-Teton Forest Service Headquarters, and the Jackson State Bank on the square in Jackson. Kranenberg was born in Grand Rapids, Michigan, in 1909, and moved to Teton County in 1927, where he developed the art of log building and furniture making while working on the Square G Ranch at Jenny

National Register of Historic Places Continuation Sheet

Section No. 8 Page 20

Sky Ranch Historic District, Moose, Teton County, WY

Lake. Kranenberg Construction was the largest employer in the valley for several years following World War II.

The Sky Ranch buildings reflect an exceptional level of skill. Care was taken to match the logs in size and shape. Soon after construction started, some of the logs had to be removed when it was discovered that the logs on the second truckload were larger than those of the first. Logs were saddle-notched on both sides and the log ends hewn into points, a technique used to keep water from seeping into the log ends. The hewn ends, whose points lay in a seemingly haphazard pattern, also add to the rustic appearance of the log buildings. Lodgepole pines were quarter-split by hand and carefully scribed to the logs to create tight, weatherproof chinking.

Roofs were originally No. 1 grade, sawn cedar shingles, laid in a pattern with shingles doubled every 7th row to break up the monotony of the roof and provide texture, a technique used on many early 20th century National Park Service buildings. The roofs on the Grand and Aunt Hill cabins have been covered with metal roofing, but Ray and Anna's Cabin and the Bathhouse still exhibit the original roofing pattern.

Stone for chimneys and fireplaces was secured from the nearby Gros Ventre Slide, and was laid up rough and undressed, for a rustic appearance. Steps up to the porches were constructed of logs cut in half, and operating board and batten shutters were installed on the windows.

The Rustic style is carried over into the interior of the buildings, with exposed log walls, wood floors, stone fireplaces, custom doors made of knotty pine, knotty pine paneling and wrought iron hardware. Rustic furniture such as bunk beds, writing desks and a dining room table and chairs were ordered locally, "from the man who runs the Silver Spur Café in Jackson" (Galey file, 3/2/53).

Another character-defining feature of the Rustic style was integration of the building with its setting (*GTNP-MPS*, F 76). Sky Ranch buildings are sited along a hillside, at the juncture of meadow and forest. Only a minimal amount of land was disturbed in the construction of the buildings, and each of the residential buildings sits on a small, flat area. The cabins themselves are low, one-story buildings, designed to intrude as little as possible on the natural setting. The logs are stained a sage-gray color to blend in with the meadow in front of them.

Other Rustic features of the landscape include a picturesque buck and rail fence, another reference to early homestead architecture in Jackson Hole. Balderston specified that the fence be three-rail instead of four: "high enough to keep the horses and cattle out, but not to shut out the game" (Galey 3/2/53). The barn and corral were the minimum construction needed to shelter a few horses for summer use. Balderston contracted with local builder Ted Hartgrave to construct the three-rail buck fence, and to build "a small barn and corral on the eastern end of the property. The barn will be of inexpensive construction and will really be a sort of a fly shed with room to store a few saddles and some baled hay."

Section No. 8 Page 21

Sky Ranch Historic District, Moose, Teton County, WY

The buildings and landscape comprising the Sky Ranch Historic District possess remarkable integrity of location, design, setting, materials, workmanship, feeling and association. The property retains all of the qualities of a mid-20th century vacation retreat, and is an excellent example both of the later settlement period in Jackson Hole, and the Rustic architecture style as developed in the Jackson Hole area.
