

NRSM 594 Seminar: Emerging Topics in Ecosystem Science

CRN: 73965

Time and Place: TBA

This is a graduate seminar put together by and for graduate students. It is a one-hour, once a week course, beginning the second week of the semester. It is a great opportunity for participants to discuss ecosystem science in a friendly and informal setting. College of Forestry and Conservation graduate students with a focus in ecosystem science are encouraged to enroll. All participants will get a one-hour session to lead, however they find most beneficial. Participants are welcome to present their research, practice a conference talk, discuss and receive feedback on a paper or proposal in preparation, discuss a recent relevant paper, etc. This seminar encourages active participation and is held for the benefit and interest of the graduate students but active faculty participation is encouraged.
